Emerald Springs Bottling Ltd

June 2026 Sales & Order Review

Monthly Sales and Order Analytics

Prepared by Marvellous Umeilechukwu

Period Covered: June 2026

Why I Needed This Review

- Emerald Springs sells bottled water, soft drinks, juice, and energy drinks to retailers, wholesalers, cafés, restaurants, hotels, and supermarkets across Ireland.
- Orders come in through five channels: phone, online, email, sales reps, and distributors.
- The raw data had inconsistent text entries and dates stored as serial numbers instead of readable dates nobody could reliably answer basic questions like “which products are selling” or “which customers are buying.”

BEFORE: Inconsistent, disconnected data

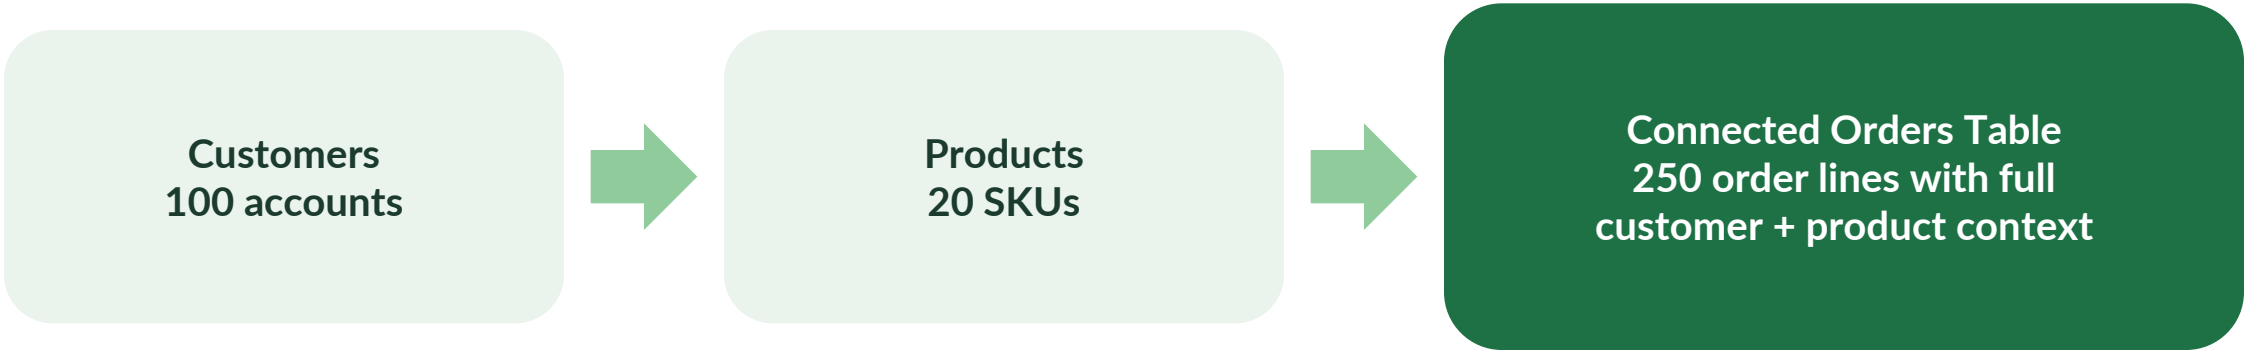

AFTER: Clean, connected, reliable

What I Set Out to Answer

1. What do the core metrics reveal about overall business health?
2. What is the daily revenue trend, and which days peaked?
3. Which county drives the highest revenue?
4. Which sales channel generates the most revenue?
5. Which product category contributes the most to revenue?
6. What is the cost price and resulting profit per product?
7. How does revenue break down by customer type?

From Raw Data to Reliable Numbers

- Three source tables: Customers (100 accounts), Products (20 SKUs), Orders (250 order lines).
- Cleaned inconsistent text fields and converted order dates from serial number format to standard dates.
- Connected the three tables using Customer_ID and Product_ID lookups every order line carries the customer's county, type, and preferred channel, plus the product's category, bottle size, unit price, and cost price.
- Calculated commercial metrics at the line level: gross sales, total cost, discount, and profit.

How I Measured Performance

- **Gross Sales:** total revenue before cost and discount.
- **Total Cost:** cost price times quantity across all orders.
- **Total Discount:** value given away through discounting.
- **Net Sales / Profit:** gross sales minus cost minus discount.
- **Profit Margin:** profit as a percentage of gross sales.
- Segmented every metric across five dimensions: time (day), county, channel, category, and customer type.

Gross Sales − Total Cost − Discount = Profit

Who Is Actually Buying

Channel Mix: Not One-Size-Fits-All

- **Louth is relationship-driven:** Phone (59.1%) + Sales Rep (27.8%) + Distributor (13.2%) = 100% of revenue, with zero online or email orders.
- **Waterford and Wexford are mixed/self-serve:** Waterford's top channel is Email (37.1%), ahead of Phone (31.8%). Wexford splits nearly evenly between Phone (40.1%) and Online (34.2%).

Channel mix is not uniform across the top counties.
Only Louth fits a relationship-heavy profile. Waterford and Wexford show meaningful digital/self-serve activity. See Slide 16 for the resulting recommendation on channel strategy.

Strengths, Risks & Opportunities

STRENGTHS

- Healthy 44.4% margin with low discounting pricing discipline is already in place.
- Water and Juice categories, and the Phone channel, are reliable revenue engines.

RISKS & OPPORTUNITIES

- Risk: revenue is concentrated in the top 5 counties and one channel (Phone) efficient today, but a vulnerability if that channel or those relationships weaken.
- Opportunity: Supermarket and Cork/Limerick are behind where their size would suggest, and Energy Boost and Sparkling Citrus are underleveraged given how profitable they already are.

Strongest & Weakest Areas

Dimension	Strongest	Weakest
County	Waterford	Limerick
Channel	Phone	Sales Rep
Category	Water	Energy Drink
Customer Type	Restaurant	Supermarket
Product (Profit)	Energy Boost	Cola

Recommendations

INVEST

- Energy Boost & Sparkling Citrus: highest profit per unit deserve marketing & shelf priority independent of category size.
- Juice category: already the 2nd-largest revenue driver worth a targeted push.

MAINTAIN

- Phone: the largest single channel overall (37% of revenue) protect staffing and response quality before shifting investment elsewhere.
- Water category & top 5 counties (Waterford, Wexford, Louth, Offaly, Galway): reliable revenue needs protecting, not fixing. Note: their channel mix varies by county (see Slide 13), so don't assume Phone applies uniformly.

RECONSIDER

- Supermarket segment: weakest customer type by a wide margin decide deliberately whether to grow it or accept it as minor.
- Cork & Limerick: investigate cause of underperformance (distribution, competition, coverage) before assuming a demand problem.

REDUCE / RE-EXAMINE

- Cola, Tonic Water, Grape Soda, Sparkling Water: lowest profit per unit review pricing or positioning, not necessarily cut.

Key Takeaways & Next Steps

- Emerald Springs converted 44.4% of gross sales into profit in June, with tight discount discipline.
- Revenue is concentrated: five counties, one dominant channel, and three customer types (Restaurant, Wholesaler, Hotel) driving most of the business.
- The most profitable individual products are not in the largest revenue category, which should influence marketing and shelf priority decisions.
- Supermarket and two major cities (Cork, Limerick) represent the clearest gaps worth investigating this quarter.
- **Next step:** repeat this review monthly to see whether these patterns hold or shift, and apply the same channel-mix breakdown used for Louth, Waterford, and Wexford to the rest of the top counties.
